Specific part

1 Technical description of the product

"AESTUVER" is a special cement-bonded, glass fibre-reinforced board, produced from a mixture of cement, lightweight mineral aggregates and water. The fire protective board has a multi-layer design.

Table 1 Dimensions and dry bulk density of "AESTUVER" fire protective boards

| Board thickness ¹ mm | Length/width mm | Tolerance mm | Dry bulk density kg/m³ |
|---------------------------------|-----------------|--------------|------------------------|
| 10 ± 1 | | | 950 ± 15 % |
| 15 ± 1 | | | 800 ± 15 % |
| 20 ± 1 | | | $700 \pm 15~\%$ |
| 25 ± 1 | ≤ 3000 x ≤ 1250 | ± 2 | 690 ± 15 % |
| 30 ± 1 | | ± 2 | 680 ± 15 % |
| 40 ± 1 | | | 650 ± 15 % |
| 50 ± 1 | | | $650\pm15~\%$ |
| 60 ± 1 | | | 640 ± 15 % |

Details on the materials used and the manufacturing process of "AESTUVER" fire protective boards are deposited with Deutsches Institut für Bautechnik.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The "AESTUVER" fire protective board may be used as a fire-protective cladding for building components or as a component of fire-resistant building components.

"AESTUVER" fire protective boards are intended to be used in accordance with the use categories 1 to 10 given in ETAG 018-1.

"AESTUVER" fire protective boards are suitable for indoor and outdoor use.

Not all use categories have been evaluated with regard to fire resistance within the framework of this European Technical Assessment. Annex B of this Assessment lists all designs for which the fire-resistance performance has been verified within the framework of this European Technical Assessment. Concerning fire resistance performance, this Assessment only applies to claddings and building components designed in accordance with the specifications given in Annex B.

The performances given in section 3 are only valid if the "AESTUVER" fire protective boards are used in compliance with

- the specifications and conditions given in Annexes A and B and
- the manufacturer's instructions as stated in section 5.

The performances have been evaluated for fire protective boards without additional laminates or coatings on the surfaces.

Intermediate board thicknesses are possible.

Z20669.14 8.11.06-3/14

Page 4 of 44 | 30 September 2014

The verifications and assessment methods on which this European Technical Assessment is based lead the assumption of working life of the "AESTUVER" fire protective boards of 25 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Not applicable

3.2 Safety in case of fire (BWR 2)

| Essential characteristic | Performance |
|--------------------------|--|
| Reaction to fire | Class A1 in accordance with EN 13501-1 |
| | See Annex A |
| Resistance to fire | See Annexes A and B |

3.3 Hygiene, health and the environment (BWR 3)

| Essential characteristic | Performance |
|--|--|
| Water permeability | Resistant in accordance with EN 12467 |
| Content and/or release of dangerous substances | Contains no dangerous substances in accordance with TR 034 |

For dangerous substances falling under the scope of the CPR for which:

- no assessment and verification methods are given (or cannot be found in TR 034), or
- "npd" is declared, or
- the chosen verification and assessment method does not comply with the regulatory requirement of a particular Member State

there might be the necessity for an additional assessment.

3.4 Safety and accessibility (BWR 4)

| Essential characteristic | Performance |
|--|-------------|
| Flexural strength | See Annex A |
| Dimensional stability | See Annex A |
| Tensile strength perpendicular to the plane of the board | See Annex A |
| Tensile strength parallel to the plane of the board | See Annex A |
| Compressive strength | See Annex A |

3.5 Protection against noise (BWR 5)

No performance determined.

Z2069.14 8.11.06-3/14

Page 5 of 44 | 30 September 2014

3.6 Energy economy and heat retention (BWR 6)

| Essential characteristic | Performance |
|--|---------------------------|
| Thermal resistance | No performance determined |
| Water vapour transmission resistance value | See Annex A |

3.7 Sustainable use of natural resources (BWR 7)

For the sustainable use of natural resources no performance was investigated for this product.

3.8 General aspects

The verification of durability is part of testing the essential characteristics.

"AESTUVER" fire protective boards are suitable for use in the following use categorie specified in ETAG 018-4, with no essential changes in their fire protective properties to be expected:

Type X: Fire protective boards intended for all uses (internal, semi-exposed and exposed) Concerning durability, the following characteristics have been tested:

| Essential characteristic | Performance |
|---|---------------------------------------|
| Resistance to deterioration caused by water | Resistant in accordance with EN 12467 |
| Resistance to soak/dry | Resistant in accordance with EN 12467 |
| Resistance to freeze/thaw | Resistant in accordance with EN 12467 |
| Resistance to heat/rain | Resistant in accordance with EN 12467 |

Durability is only ensured if the specifications of intended use according to Annexes A and B and the manufacturer's instructions in section 5 are taken into account.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

According to Decision of the Commission of 22 June 1999 (1999/454/EC) (OJ L 178/52 of 14.7.1999, p. 3), as amended by Decision of the Commission of 8 January 2001 (2001/596/EC) (OJ L 209/33 of 2.8.2001, p. 2) , the system of assessment and verification of constancy of performance (see Annex V and Article 65 Paragraph 2 to Regulation (EU) No 305/2011) given in the following table applies.

| Product | Intended use | Level or class (resistance to fire) | System of assessment and verification of constancy of performance |
|----------------------------------|--|--|---|
| "AESTUVER" fire protective board | fire protective cladding for building components or component of fire-resistant building components | any | 1 |

Z20669.14 8.11.06-3/14

Page 6 of 44 | 30 September 2014

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

The technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

The manufacturer shall provide instructions on processing, packaging, transport, storage and use, maintenance and repair of the construction product.

Issued in Berlin on 30 September 2014 by Deutsches Institut für Bautechnik

Prof. Gunter Hoppe Head of Department beglaubigt: von Hoerschelmann

Z20669.14 8.11.06-3/14

1 Performance of the product

1.1 Safety in case of fire

1.1.1 Reaction to fire of "AESTUVER" fire protective board

Persuant to Commission Decisions 96/603/EC and 2000/605/EC¹, the uncoated "AESTUVER" fire protective boards are classified in class A1 in accordance with EN 13501-1.

1.1.2 Resistance to fire

For the resistance-to-fire performance of claddings or building components using "AESTUVER" fire protective boards, see Annex B.

1.2 Energy economy and heat retention

1.2.1 Water vapour transmission resistance value in accordance with EN ISO 12572, test condition A

| Thickness d | Water vapour transmission resistance value µ |
|-------------|--|
| 10 mm | 36 |
| 15 mm | 25 |
| 20 mm | 54 |

Official Journal of the European Communities L 267/23 of 19.10.1996 and L258/36 of 12.10.2000

"AESTUVER" fire protective board

Performance of the product
Safety in case of fire
Water vapour transmission resistance value

Annex A 1

1.3 Safety and accessibility

1.3.1 Flexural strength

Mean value of the modulus of rupture (MOR) of the "AESTUVER" fire protective boards determined in accordance with EN 12467, section 7.3.2

| Thickness d | Mean value of the modulus of rupture (MOR) |
|-------------|--|
| ≥ 10 mm | at least 3.5 MPa |
| ≥ 15 mm | at least 3.0 MPa |
| ≥ 30 mm | at least 2.0 MPA |
| 60 mm | at least 1.5 MPA |

1.3.2 Dimensional stability

Relative change in length and thickness of the "AESTUVER" fire protective boards after a change in the relative humidity, tested in accordance with EN 318

| Thickness d | Relative change in length |
|-----------------|--|
| 10 mm and 20 mm | 0.3 mm/m when the relative air humidity changes from 65 % to 85 %* |
| | -0.4 mm/m when the relative air humidity changes from 65 % to 30 %** |

| Thickness d | Relative change in thickness |
|-------------|--|
| 10 mm | 0.0 % when the relative air humidity changes from 65 % to 85 %* |
| | -0.1 % when the relative air humidity changes from 65 % to 30 % ** |
| 20 mm | 0.1 % when the relative air humidity changes from 65 % to 85 %* |
| | -0.1 % when the relative air humidity changes from 65 % to 30 % ** |

swelling behaviour

1.3.3 Tensile strength perpendicular to the plane of the board in accordance with EN 319

| Thickness d | Average tensile strength perpendicular to the plane of the board |
|-------------|--|
| 10 mm | at least 1,5 MPa |
| 20 mm | at least 0,8 MPa |

1.3.4 Tensile strength parallel to the plane of the board in accordance with EN 789, section 9

| Thickness d | Average tensile strength parallel to the plane of the board |
|-------------|---|
| 10 mm | at least 1,5 MPa |
| 20 mm | at least 2,6 MPa |

1.3.5 Compressive strength in accordance with EN 789, section 8

| Thickness d | Average compressive strength |
|-------------|------------------------------|
| 10 mm | at least 24,4 MPa |
| 20 mm | at least 9,3 MPa |

| "AESTUVER" fire protective board | |
|---|-----------|

^{**} shrinking behaviour

2 Designs for which the fire-resistance has been verified within the framework of this European Technical Assessment

Table 2 provides an overview of the fire resistance classes of all designs for which the fire resistance performance has been evaluated in the context of this European Technical Assessment.

For the designs listed in this table and executed in accordance with the specifications given in these Annexes, the fire resistance performance given shall be deemed verified within the framework of this European Technical Assessment.

Table 2

| Designs evaluated with regard to fire-resistance within the framework of this ETA | Classification in accordance with EN 13501-2 | Test method | Intended use according to ETAG 018-1 (use category) | Details | Date of addition to this ETA |
|---|---|--------------------------------|--|-------------------------------|--|
| Load-bearing steel elements cladded by 15 to 60 mm thick "AESTUVER" fire protective boards | R 15 to R 240 | EN 1363-1 and EN 13381-4 | Type 4 | Annex C Pages 10 to 39 | 30 September 2014 |
| Trapezoidal steel profile ceiling (load-bearing) cladded by 15 mm thick "AESTUVER" fire protective boards | RE 120 REI 30 | EN 1363-1 and EN 1365-2 | Type 10 | Annex D Pages 40 to 44 | 5 January 2012 Revised: 27 June 2013 |

| "AESTUVER" fire protective board | |
|---|---------|
| Overview of designs verified for fire resistance within the framework of this European Technical Assessment | Annex B |

3 Load-bearing steel elements cladded with "AESTUVER" fire protective boards (use category 4)

3.1 Classification

The designs listed in Annex B, Table 2, have been tested and assessed in accordance with EN 1363-1 and EN 13381-4 and found to fulfil the requirements of classes R 15 to R 240 (depending on the design variants 1 to 5, see below) in accordance with EN 13501-2.

This fire resistance performance can only be guaranteed if the requirements set out in sections 3.2 to 3.6 and Annexes C 4 to C 30 are met.

3.2 Steel beams and steel columns (without openings in the web)

| Standard | Steel grade | Type of the profile | Beam maximum height web | Column maximum width |
|------------|--------------------|-----------------------------------|---|-------------------------|
| | C225 | IPE, HEA, HEM | 496,5 mm | |
| EN 10025-1 | S235 to S450 | Angles, U-channels and T-sections | (total height beam: plus 2 x thickness flange and weld) | 600 mm |
| | | Hollow sections | | |

3.3 Fastening of the fire protective boards

| Fastening | Staples (Design variant 1 to 4) | Screws (Design variant 5) |
|--|--|------------------------------|
| Standard | EN 14592 | ETA-11/0284; EN 14592 |
| Dimensions, position and spacing | Design variant 1 see Annex C 4 to C 9 | |
| | Design variant 2 see Annex C 10 to C 15 | See Annex C 28 to 30 |
| | Design variant 3 see Annex C 16 to C 21 | See Affilex C 20 to 30 |
| | Design variant 4 see Annex C 22 to C 27 | |

3.4 Conditions for installing the fire protective boards

- The fire protective boards shall be butt-jointed. The distance between the fire protective boards and the flange of the steel sections shall be 5 to 50 mm.
- The joints between the fire protective boards shall be lined with one-piece or two-piece "noggins" consisting of the fire protective boards. The dimensions of the noggins shall be:
 - width 150 mm
 - thickness 1 x 15 mm (design variants 2 and 4) and 2 x 15 mm (design variants 1 and 3)
 - thickness 1 x 20 mm (design variants 2, 4 and 5) and 2 x 20 mm (design variants 1 and 3)
- In the joint areas of fire protective boards which are adjacent to the flanges of the steel sections no noggins need to be installed.
- For installation variants, see Annex C3.
- All joints between the cladded steel elements and the adjacent fire-resistant separating building
 components shall be filled and completely closed with suitable materials with a reaction-to-fire
 class A1/A2-s1,d0 in accordance with EN 13501-1 and a melting point of > 1000°C.

"AESTUVER" fire protective board

Use category 4 – Cladding for protection of load-bearing steel members

Design variant 2 – Cladded steel beams

Fastening of the fire protective boards with staples (low amount in one row)

Fastening of the fire protective boards with screws

Annex C 30

4 Load-bearing trapezoidal steel profile ceiling cladded with 2-layers of 20 mm thick "AESTUVER" fire protective boards (use category 10)

4.1 Classification

The design listed in Annex B, Table 1, has been tested in accordance with EN 1363-1 and EN 1365-2 and found to fulfil the requirements of class REI 30 and RE 120 in accordance with EN 13501-2.

This fire resistance performance can only be guaranteed if the requirements set out in sections 4.2 to 4.6 hereafter and Annexes D 3 and D 4 are met

4.2 Trapezoidal steel profile ceiling in accordance with EN 14782

| Sheet thickness [mm] | Spacing upper/lower flange [mm] | Permitted span [mm] |
|----------------------|---------------------------------|--|
| ≥ 0,75 | ≤ 280 | depending on stability requirements, deflection ≤ I/300 mm |

The trapezoidal steel profiles can be arranged in positive or negative positions. The upper and lower flanges shall be sufficiently wide to secure the fire protective boards.

The suitability and the dimensions of the trapezoidal steel profiles and their fastening shall be determined by measurement or testing in accordance with the stability requirements applicable in the Member State of destination.

4.3 Fastening of the trapezoidal steel profile ceiling

| | Fastened to the adjacent building component | Trapezoidal steel profiles fastened to one another | |
|-----------------------------------|---|---|--|
| Position of the fastening devices | Perpendicular to the longitudinal profiles on the lower flange (double-sided), 2 screws per side | Parallel to the longitudinal profiles in the areas where the sheets overlap | |
| Spacing of the fastening devices | ≤ 280 mm | ≤ 600 mm | |
| Type of fastening devices | Suitable screws with sufficient corrosion $-$ shaft diameter d \geq 5.5 mm $-$ head diameter d \geq 10.5 mm $-$ length l \geq 20 mm | | |

| "AESTUVER" fire protective board | |
|--|-----------|
| Use category 10 - Cladding of a load-bearing trapezoidal steel profile ceiling Execution of the trapezoidal steel profile ceiling | Annex D 1 |

Z30885.14 8.11.06-3/14

4.4 Fire protective boards

15 mm thick "AESTUVER" fire protective boards shall be used.

The fire protective boards shall be arranged in 2 layers beneath the trapezoidal steel profiles perendicular to the supporting direction of the trapezoidal steel profiles.

The fire protective boards shall be butt-jointed. The joints between the fire protective boards shall be staggered in accordance with Annex 4.

4.5 Fastening of the fire protective boards

The fire protective boards shall be fastened on 4 sides to the lower flanges of the trapezoidal steel profiles as described in Table 3. The distance to the edge of the board shall be no less than 25 mm.

Table 3

| | 1st layer of boards | 2nd layer of boards |
|----------------------------------|--------------------------------------|--------------------------------------|
| Position of the fixing | On every second lower flange | On every lower flange |
| Spacing of the fastening devices | ≤ 600 mm | ≤ 300 mm |
| Type of fastening device | Fermacell Powerpanel screws 3.9 x 40 | Fermacell Powerpanel screws 3.9 x 55 |

The technical details of the Fermacell Powerpanel screws are deposited with Deutsches Institut für Bautechnik.

4.6 Connection to adjacent building components

The fire protective boards shall be arranged so that their faces join up with the separating fire-resistant building components, which shall be of at least the same fire resistance class as the trapezoidal steel profiles clad with the fire protective boards.

All joints between the faces of the fire protective boards and the adjacent fire-resistant separating building components shall be completely filled with dimensionally stable mineral wool produced from molten stone and then sealed. The mineral wool shall meet the requirements set out in EN 13162 and shall have a reaction-to-fire class A1/A2-s1,d0 in accordance with EN 13501-1.
